

Plesk template for zabbix server

<https://www.zabbix.com/integrations/plesk>

[https://github.com/zabbix/community-templates/tree/main/Applications/template_plesk_obsidian_\(active\)](https://github.com/zabbix/community-templates/tree/main/Applications/template_plesk_obsidian_(active))

1. Choose the template for our zabbix version

2. Select the xml file either download it or copy to a txt file and save it.

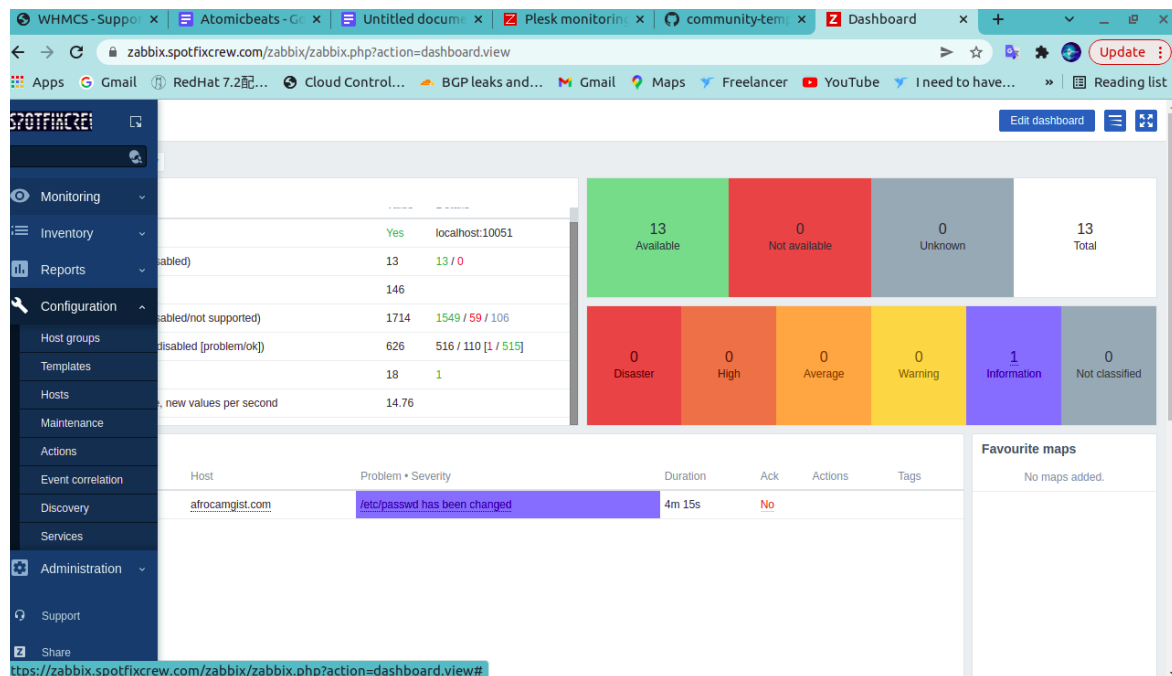

3. Login to your zabbix server

<https://zabbix.spotfixcrew.com/zabbix>

user: Admin

password: 2d4P%utTWg5FNdvY

4. Select configuration from the dashboard

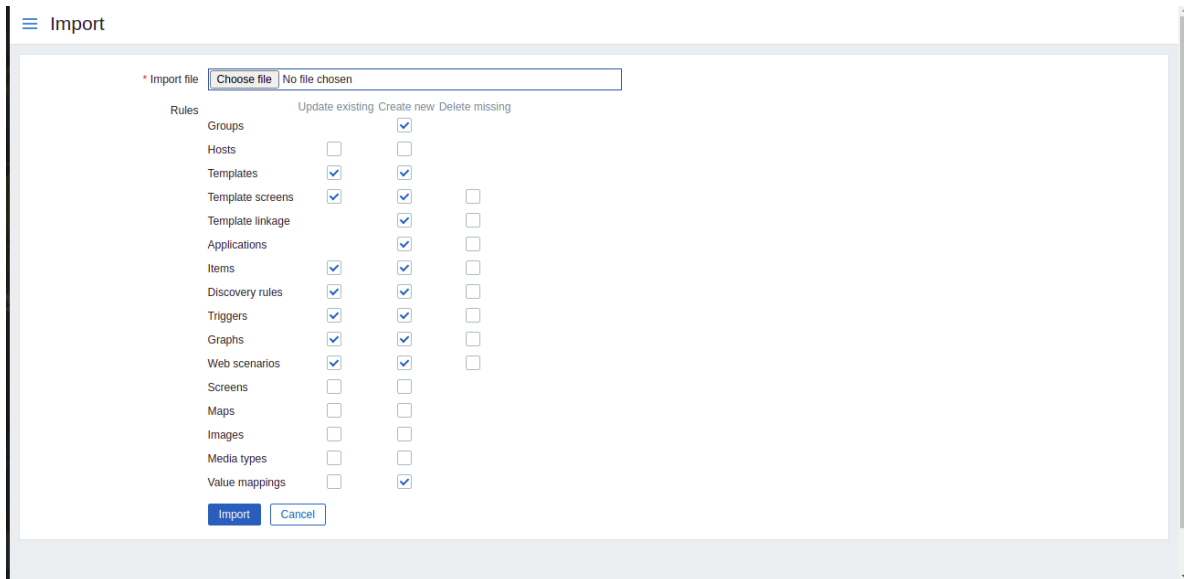

5. In configuration select templates.

The screenshot shows the Zabbix Templates configuration page. The top navigation bar includes links for Create template and Import. The main content area displays a table of templates with columns for Name, Hosts, Applications, Items, Triggers, Graphs, Screens, Discovery, Web, Linked templates, and Tags. The table lists various templates such as CustomApp Plesk, Template App Apache by HTTP, Template App Apache Tomcat JMX, Template App Ceph by Zabbix Agent2, Template App Docker, Template App Elasticsearch Cluster by HTTP, Template App Etcd by HTTP, Template App FTP Service, Template App Generic Java JMX, Template App HAProxy by HTTP, and Template App HAProxy by Zabbix agent.

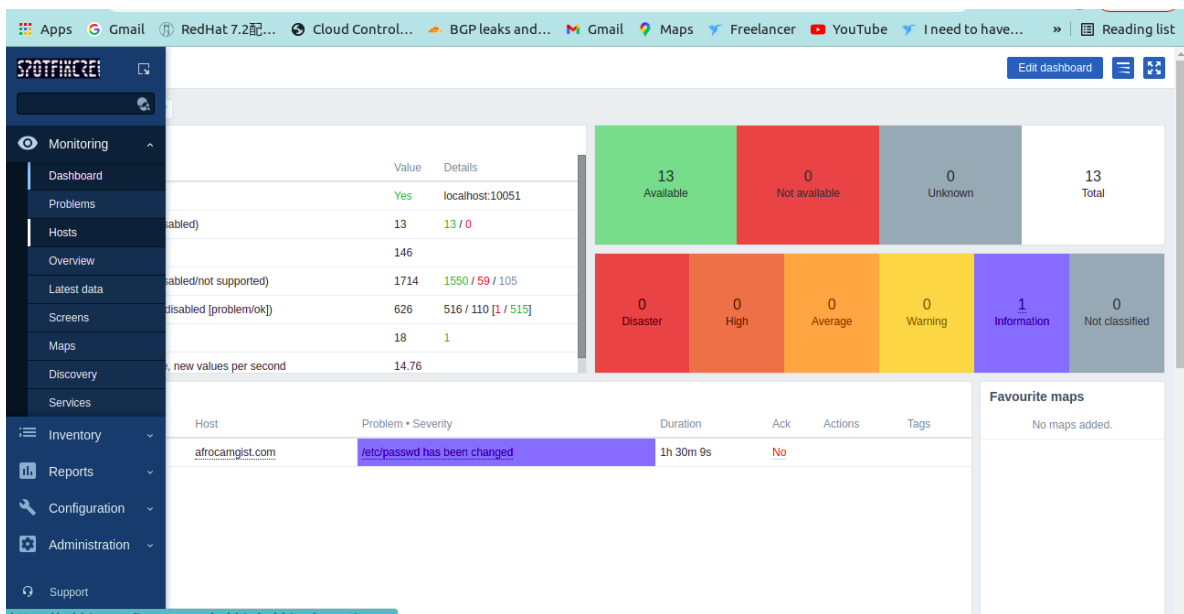

Name	Hosts	Applications	Items	Triggers	Graphs	Screens	Discovery	Web	Linked templates	Linked to templates	Tags
CustomApp Plesk	Hosts 4	Applications 19	Items 41	Triggers 41	Graphs	Screens	Discovery	Web			
Template App Apache by HTTP	Hosts 7	Applications 2	Items 22	Triggers 5	Graphs 3	Screens 1	Discovery 1	Web			
Template App Apache Tomcat JMX	Hosts	Applications 5	Items 32	Triggers 5	Graphs 4	Screens	Discovery	Web			
Template App Ceph by Zabbix Agent2	Hosts	Applications 2	Items 51	Triggers 4	Graphs 5	Screens	Discovery 2	Web			
Template App Docker	Hosts	Applications 2	Items 44	Triggers 3	Graphs 5	Screens 1	Discovery 2	Web			
Template App Elasticsearch Cluster by HTTP	Hosts	Applications 2	Items 23	Triggers 12	Graphs 1	Screens	Discovery 1	Web			
Template App Etcd by HTTP	Hosts	Applications 2	Items 38	Triggers 12	Graphs 7	Screens	Discovery 2	Web			
Template App FTP Service	Hosts	Applications 1	Items 1	Triggers 1	Graphs	Screens	Discovery	Web			
Template App Generic Java JMX	Hosts	Applications 1	Items 55	Triggers 17	Graphs 11	Screens	Discovery	Web			
Template App HAProxy by HTTP	Hosts	Applications 2	Items 6	Triggers 4	Graphs	Screens 3	Discovery 6	Web			
Template App HAProxy by Zabbix agent	Hosts	Applications 2	Items 6	Triggers 4	Graphs	Screens 3	Discovery 6	Web			

6. In templates in the right side corner select import .

7. Choose the xml file we saved in the step 2 and select import.

Then from monitoring select hosts

8. Select the host that need to add the template. And select the configuration .

Information Average Disaster

Apply Reset
